

# How to Combine Security and Safety of Radioactive Sources and Good Patient Service in Public of Large Hospitals

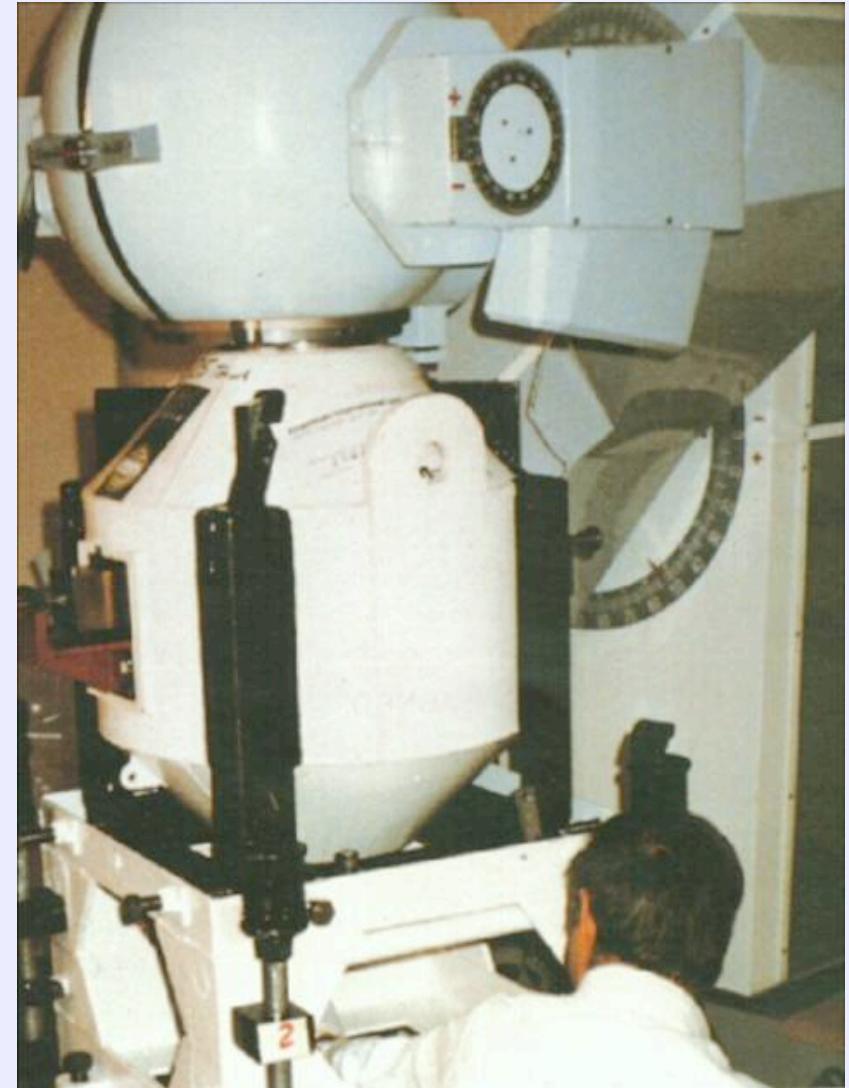

J. Kopp, Klinikum Augsburg  
12th European ALARA Workshop, Vienna

## Medical Sources

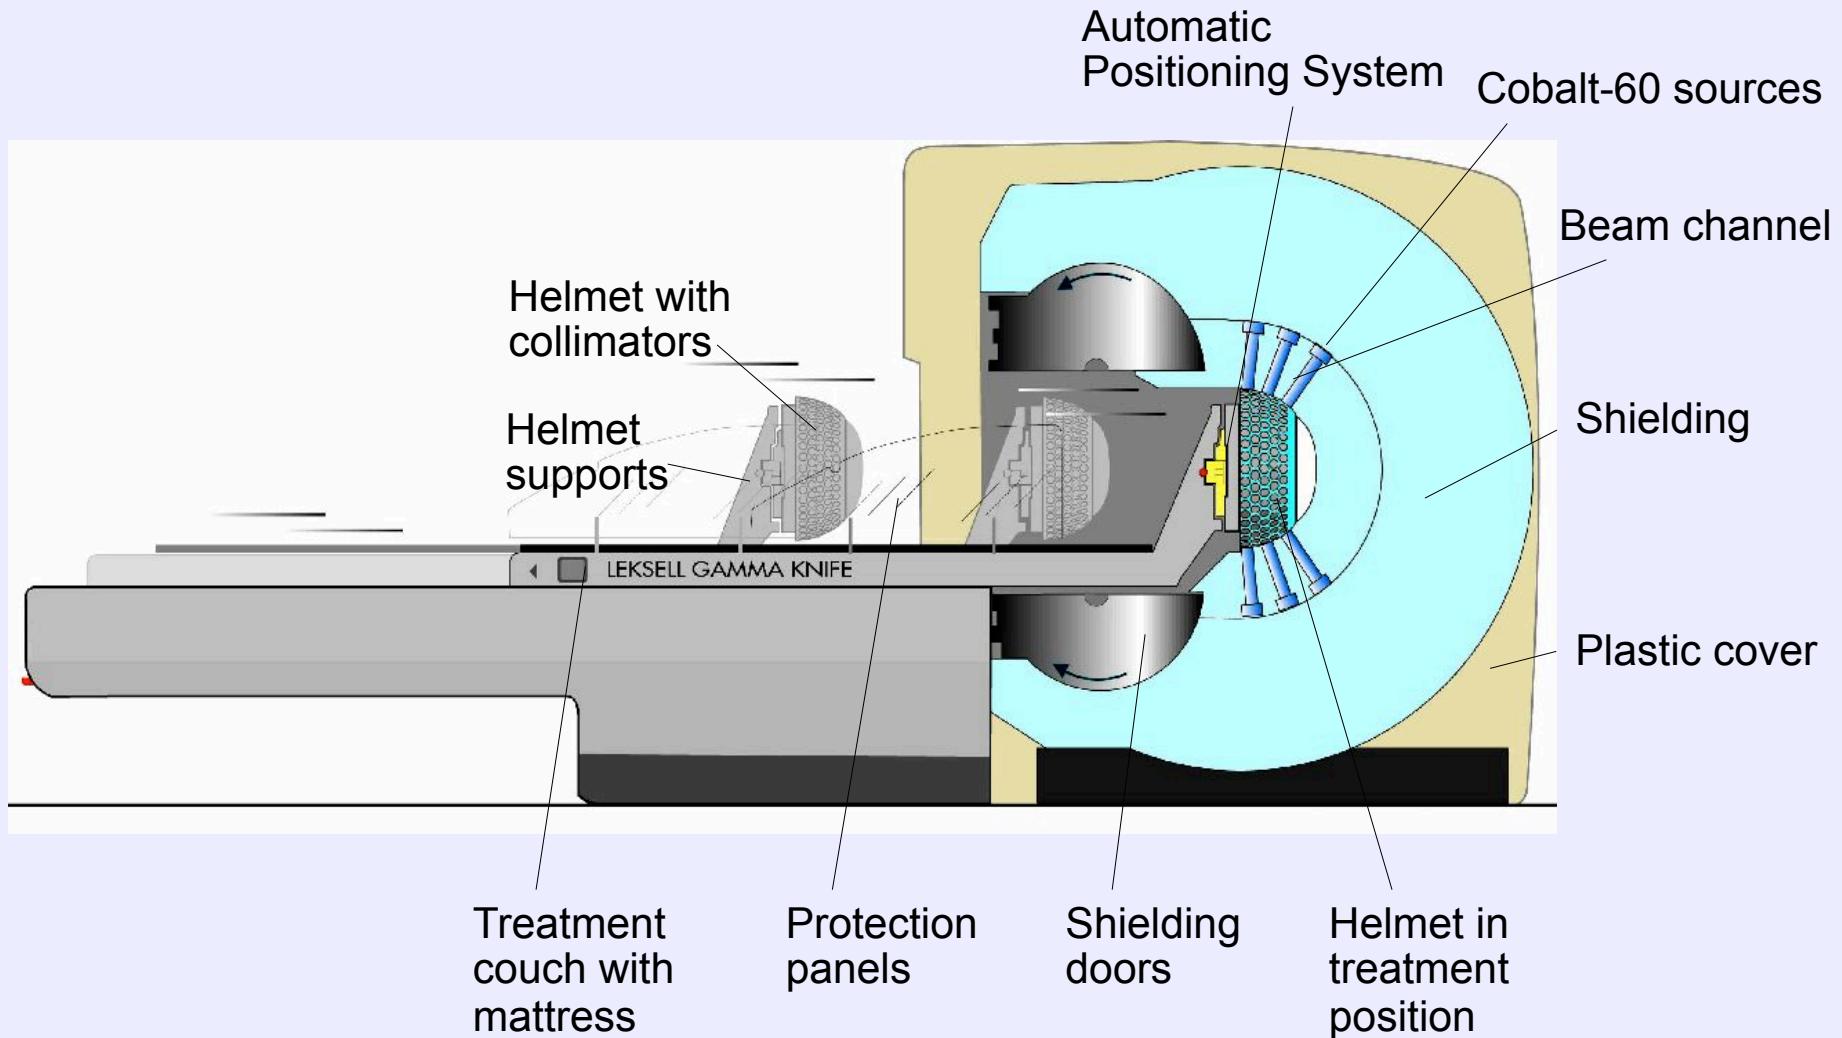

**External Beam Therapy**

**Co-60 Teletherapy →  
replaced by accelerators  
in Germany since 2000**

**LEKSELL Gammaknife**  
**201 Co-60 sources**  
**with up to**  
**1330 GBq(36 Ci)/source**

## Leksell Gamma Knife® C

## Medical Sources

Blood Irradiators

contain Cs137-Chloride!

Activity 22 TBq – 185 TBq (600 – 5000 Ci)

HDR-Afterloading devices

up to 600 GBq (16 Ci) Iridium192

## Afterloadingsystems

## Blood Irradiators

**GSR C1**  
Blutbestrahlung

## Devices with Built-in Sources

**PET**

**SPECT Gammakameras**

**Bone Densitometers**

➤ **Replaced by X-Ray**

## Mass-Spectrometers in Clinical Labs

## Other Sources

- Quality control and calibration sources
  - Sr-90, Cs-137, I-129, Co-57, Na-22, Ba-133 etc.
- Sources for LDR-Brachytherapy
  - I-125
- Radionuclide Generators
  - Mo-99/Tc-99m, Ge-68/Ga-68 etc.

## How to Provide Safety and Security in a Hospital?

### Organization

- Site Planning
  - „Closed“ departments but mix functional areas and offices or integrate the sources in areas that are on duty around the clock to gain „internal public“
  - Secure emergency exits but be aware that there might be smokers among your personnel
  - Keep the number of authorized people adequate - this includes cleaning personnel

## **How to Provide Safety and Security in a Hospital?**

### **Education and Training**

Make security an integral part of your safety culture

e.g. everyone entering should be identified by the staff - independent of status (patient, physician from other department, maintenance personnel etc.)

## How to Provide Safety and Security in a Hospital?

### Safety Installations

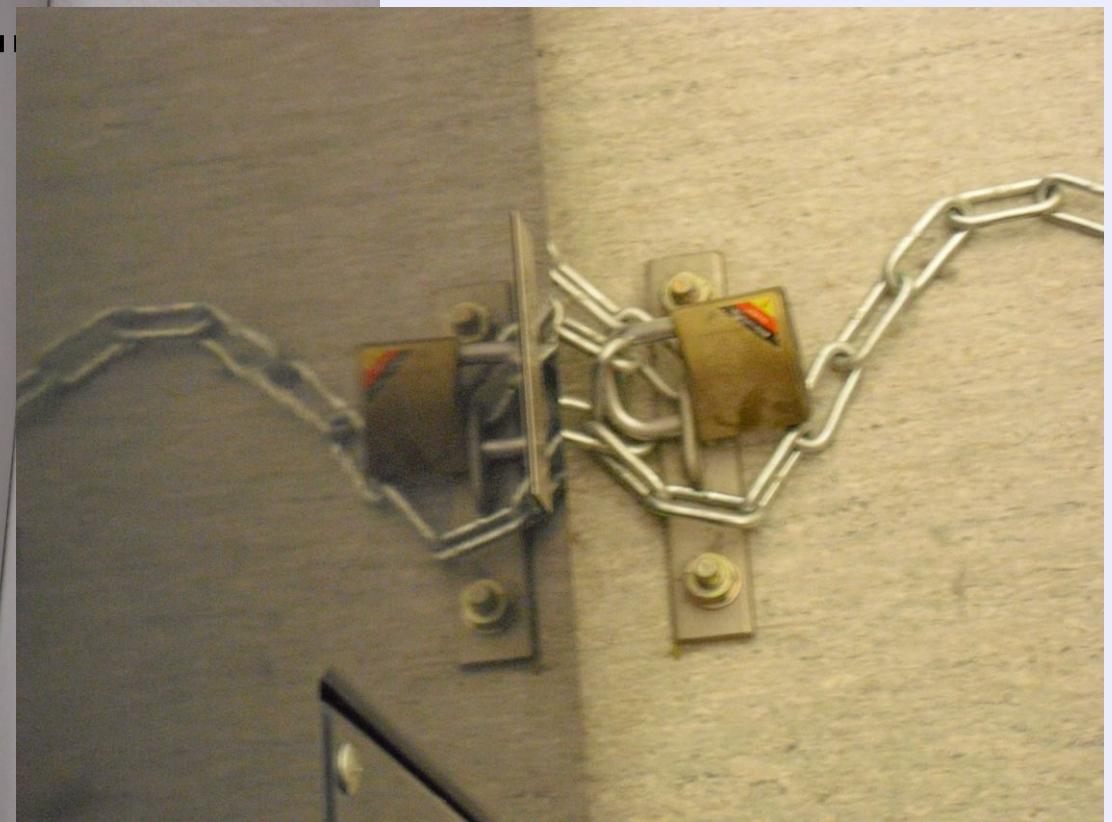

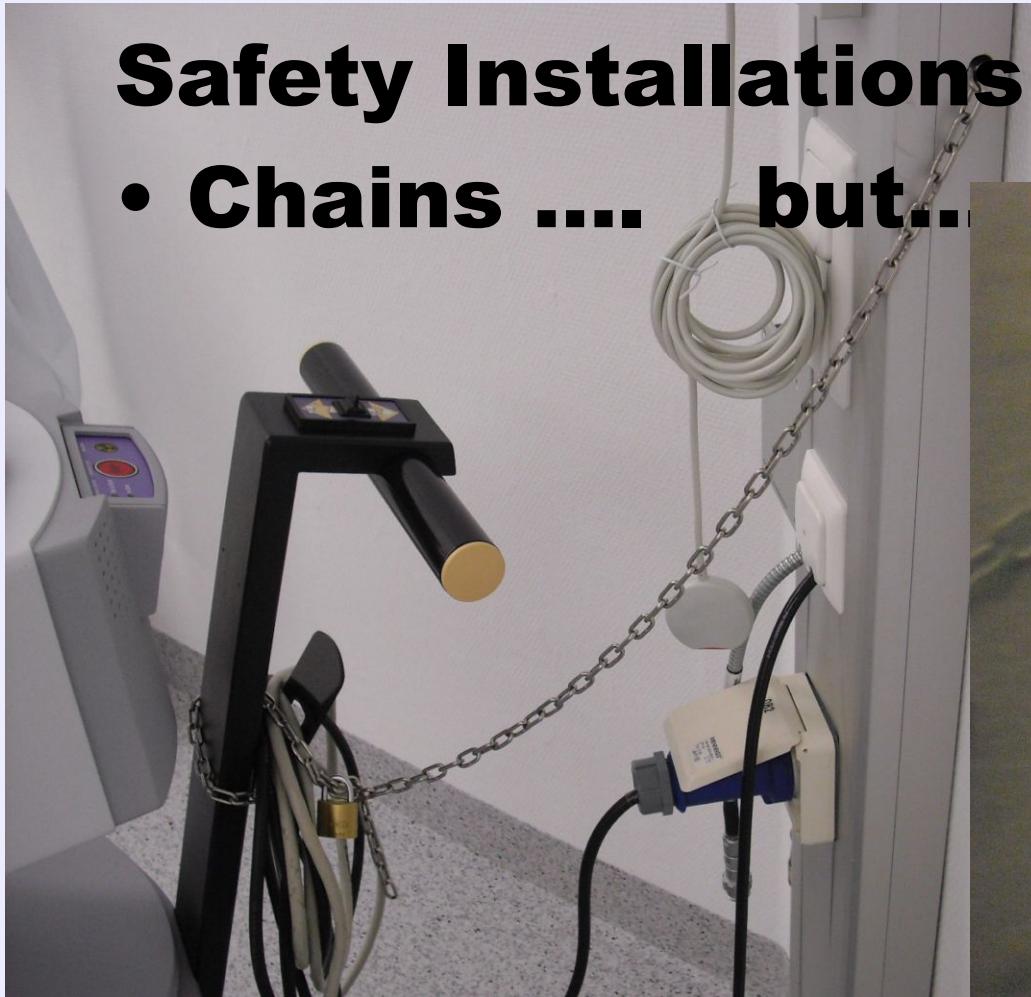

- Safes ....but...

## How to Provide Safety and Security in a Hospital?

### Safety Installations

- Chains .... but...

# How to Provide Safety and Security in a Hospital? Safety Installations

- Bunkerdoors, surveillance, locks ....

## Conclusion

- We cannot provide absolute safety especially in planned criminal intend but we should try...
- We can prevent from “occasional” theft...
- Security should be an integral part of safety culture

**We should discuss tools for optimization of security and safety**
